

Scenarios

Scenarios where the platform can contribute to effective threat intelligence

Melvin Viado

Threat Detection and Response

Scenario:

A suspicious alert from SIEM about a new phishing domain needs external context.

The Security Operations Center team is trying to detect and investigate the cyber threat.

- Uncover threats in both open and secretive sources
 - Stolen credentials
 - Fraud campaigns
 - Ransomware chatter
- Reduces alert fatigue
 - Noise filtration
 - Surfacing mission-critical risks only
 - Context rapidly provided

Vulnerability Management

Scenario:

A new zero-day vulnerability is exposed.

The cyber threat intelligence team has many unresolved security findings and is deciding which vulnerability to patch first.

- Newly discovered and zero-day vulnerabilities are identified
 - Exploit availability
 - Exploitation in the wild
 - Threat actor chatter
 - Risk scores
- Integrated into ticketing or VM tools
 - Reprioritizes remediation based on threat-based risk

Fraud and Account Takeover Prevention

Scenario:

The security team detects unusual login patterns and spikes in chargebacks.

The security team attempts to prevent financial losses from the abuse of the online services of the company.

- Tracking of fraud and brand abuse
 - Fraudulent activity
 - Payment-card exposures
 - Customer or organization data leaks
- Alerts and analysis delivered early
 - Protects brand reputation
 - Minimizes financial loss
 - Preserves customer trust

Brand Abuse and Phishing Protection

Scenario:

Phishing emails, fake social profiles, and look-alike domains are discovered by employees.

The security team aims to protect the online presence of the organization from impersonation of its brand.

- Phishing detection and monitoring
 - Domains with typos
 - Fake apps
 - Impersonation accounts
- Removal
 - Malicious asset takedown
 - Evidence packs for legal escalation

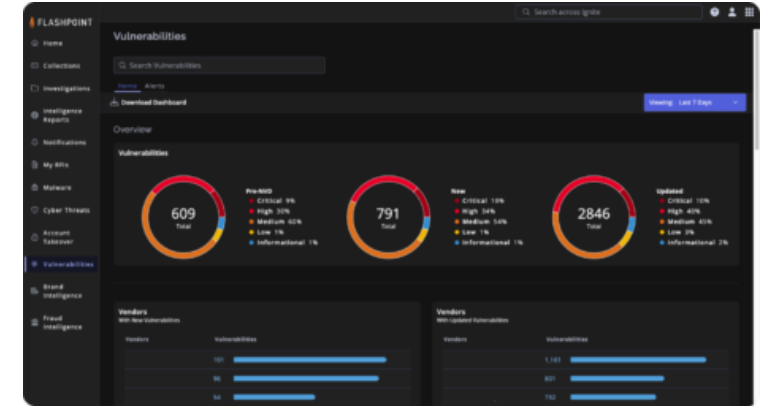

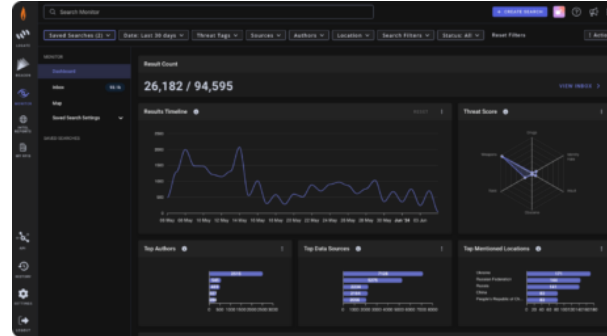

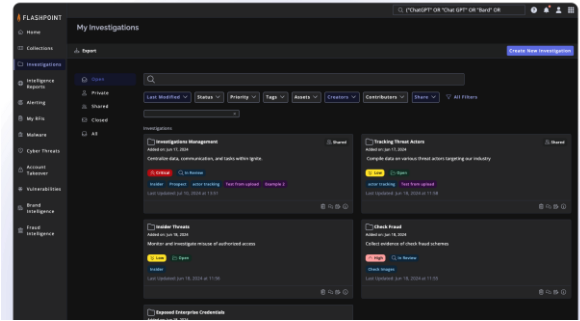

Third-party and Supply Chain Risk

Scenario:

The company recently proceeded with onboarding of a high-risk vendor.

The security team is tasked with continuously assessing the vendor to determine if they pose as an operational risk.

- Vendor analysis
 - Previous breaches
 - Mentions in criminal communities
 - Exposed credentials
 - Exploited vulnerabilities
 - Brand abuse
- Internal changes
 - Vendor tier
 - Contractual requirements
 - Monitoring Levels
 - Contingency Plans
