Questions

1. List four places where mobile device information might be stored

- Internal memory
- SIM card
- Removable or external memory cards
- Network provider

2. Typically, you need a search warrant to retrieve information from a service provider.

True or False?

True – Checking a network provider requires a *search warrant* or subpoena

3. The term TDMA refers to which of the following?

- a. A technique of dividing a radio frequency so that multiple users share the same channel

4. What's the most commonly used cellular network worldwide?

4G LTE

5. Which of the following relies on a central database that tracks account data, location data, and subscriber information?

- b. MSC – Mobile Switching Center

6. GSM divides a mobile station into _____ and _____.

GSM divides a mobile station into the SIM card and the mobile equipment (ME).

7. SD cards have a capacity up to which of the following?

- c. 64 GB

8. Describe two ways you can isolate a mobile device from incoming signals.

Place the device in a paint can – the metal creates a barrier from the radio waves used for communication.

Use a Faraday bag – these bags use conductive material to block signals from passing through the bag.

9. Which of the following categories of information is stored on a SIM card? (Choose all that apply.)

- b. Call data
- c. Service-related data

10. Most SIM cards allow _____ access attempts before locking you out.

Most SIM cards allow 3 access attempts before locking you out.

11. SIM card readers can alter evidence by showing that a message has been read when you view it.

True

12. The uRLLC 5G category focuses on communications in smart cities.

True – Internet of Anything will eventually include 5G smart devices including uRLLC 5G devices

13. When acquiring a mobile device at an investigation scene, you should leave it connected to a laptop or tablet so that you can observe synchronization as it takes place.

False – Mobile devices attached to a PC via a USB cable should be disconnected from the PC immediately to prevent synchronization that might occur automatically and overwrite data.

14. Remote wiping of a mobile device can result in which of the following?

- a. Removing account information

15. The Internet of Things includes _____ as well as wired, wireless, and mobile devices.

The Internet of Things includes sensors and actuators, as well as wired, wireless, and mobile devices.

16. Which of the following is a mobile forensics method listed in NIST guidelines?

- a. Logical extraction
- c. Physical extraction
- d. Hex dumping

17. According to SANS DFIR Forensics, which of the following tasks should you perform if a mobile device is on and unlocked?

- a. Isolate the device from the network.
- b. Disable the screen lock.
- c. Remove the passcode.

18. Which organization is setting standards for 5G devices?

5G standards are being negotiated and developed by the *IMT 2020* working group of the International Telecommunications Union.
